VII-26. Overview of the entity's material responsible business conduct issues. Please indicate material responsible business conduct and sustainability issues pertaining to environmental and social matters that present a risk or an opportunity to your business, rationale for identifying the same, approach to adapt or mitigate the risk along-with its financial implications, as per the following format

S. No.	Material Issue Identified	Indicate whether risk or opportunity (R/O)	Rationale for identifying the risk/opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (Indicate positive or negative implications)
1	Energy efficiency	O	VRL operates India's largest vehicle fleet, where fuel consumption is a critical metric impacting both energy efficiency and operational costs. To enhance our operational efficiency, we are continuously investing in acquiring advanced, energy-efficient vehicle fleet. Additionally, we have installed renewable energy sources to power our major facilities and hubs.		Positive
2	GHG emissions	R	For a logistics company like ours, greenhouse gas (GHG) emissions from both vehicle operations and facility energy consumption are critical factors with significant potential to impact our business. Anticipating upcoming policies related to tracking and reporting GHG emissions, we recognize the importance of aligning our operations accordingly. We have already begun strategizing to ensure compliance and enhance our environmental sustainability efforts.	To manage our GHG emissions, we are actively transitioning our fleet to operate sustainably and in an environmentally friendly manner, with a significant portion of our capital expenditure dedicated to this initiative. Many of our major facilities already utilize solar energy, and we are expanding their coverage. Additionally, we have implemented energy-efficient techniques across our facilities. These initiatives are part of our ongoing efforts to reduce CO2 emissions and enhance sustainability.	Negative

3	Water Management	R	Water is an important environmental resource, and equally significant in our operations where it is primarily used for cleaning vehicles. Given that VRL operates the largest self-owned vehicle fleet, the volume of water required for vehicle sanitation is substantial, making water management a critical focus area.	To manage resources efficiently, we recycle most of our waste. Water waste generated from vehicle cleaning is reused for gardening purposes instead of being directly released into sewage systems, thus significantly reducing water disposal. Additionally, at our central facility in Varur, we have installed a bacteria-based water treatment system. The purified water from this system is reused in our washing processes, and the sludge produced is distributed to local farmers as fertilizer, also supporting agricultural needs sustainably.	Negative
4	Air Pollution	R	We do have an air emission footprint due to the nature of our industry. We recognize that the emissions from our vehicles can have several negative impact on the regions we operate in. Hence, we consider this issue to be material.	Our vehicles undergo regular maintenance and comply with all environmental laws, ensuring that emissions are kept well within the provided limits. Also, we are actively transitioning from traditional vehicles to more environmentally friendly options, such as BS-VI vehicles, and we've onboarded several EV Autos and E-Scooters in our fleet to further reduce our air emissions.	Negative

5	Occupational Health and Safety	R	Due to the nature of our business, it is crucial for us to adhere strictly to all applicable health and safety regulations. At any given time, more than 50% of our total workforce is on the road delivering products. Any lapses in compliance, whether by management or employees, could severely impact our company's reputation, and finances, and even lead to serious injuries or fatalities. Therefore, ensuring health and safety standards is of utmost importance to us.	We prioritize adherence to all applicable laws and regulations. We conduct regular sessions for our employees on road safety and maintain our vehicle fleet in optimal condition at all times.	Negative
6	Human Resource	R	VRL, as a service-based company, relies heavily on its drivers and management as the backbone of our industry. Therefore, the recruitment and retention of skilled personnel are vital not only for ensuring operational efficiency but also for maintaining high service standards and ensuring customer satisfaction.	To build a strong workforce, we recruit all drivers as full-time employees and provide them with all statutory benefits. Regular training sessions are provided to ensure continuous development. Additionally, we have a driver training facility in Hubballi where drivers can voluntarily attend training programs. We impart necessary training to employees of all levels to improve their skills. We have covered our drivers and maintenance workforce under group insurance for ensuring stability to their families.	Negative

7	Cyber Security	R	Due to the nature of our business, our company heavily relies on digitally provided information, making the protection of this data the most important. Safeguarding this information is crucial not only for maintaining customer trust but also for mitigating potential risks associated with data breaches. Also, noncompliance with related & applicable regulations could cause severe damage to the company's both financial, health and reputation.	We have implemented an Information Security policy overseen by our IT department to protect the information of both customers and employees in our database.	Negative
8	Customer satisfaction	O	VRL is committed to continuous improvement and delivering the highest quality services to ensure customer satisfaction.		Positive
9	Material Sourcing	R	Our supply chain faces various risks related to the critical materials used in our processes. These materials are often specialized and have limited alternatives. Issues such as high demand, low stock, transportation challenges, or supply disruptions can lead to price increases and sometimes unavailability of the product, even at higher prices.	To mitigate such issues, VRL has diversified its supply chain over the years, making it more resilient to value chain disruptions. We ensure to maintain alternatives for required products and services, allowing our operations to continue smoothly despite any challenges.	Negative

EI-8. Does the entity have any project related to reducing Green House Gas emission? If Yes, then provide details.-

As a logistics company, we prioritize the efficient management of our fleet emissions and are actively working to reduce our overall greenhouse gas (GHG) emissions. Given that fleet fuel usage is our primary emission source, our major focus has been on transitioning from older vehicle models to BSVI-compliant vehicles. Additionally, we have commenced the commercial application of electric vehicles for local deliveries, and pick-ups. We are systematically phasing out older models by scrapping them and replacing them with new, energy-efficient vehicles that emit less pollution.

In addition to this, we are committed to using biodiesel instead of fossil fuels to further reduce emissions. However, due to unviable pricing and limited availability of biodiesel, we could not source it in the current fiscal year.

On a separate note, an earlier project of the company was approved by UNFCCC and the company is holding 74,047 certified carbon credits which it would monetize at an opportune time.

Our waste management practices consist of the following:

1. E-waste, hazardous waste, and battery waste are directed to third-party licensed recyclers for proper handling.
2. Water waste generated from vehicle washing is either treated and reused for washing purposes or ultimately used for gardening.
3. At our Varur Facility, which hosts a centralized vehicle maintenance facility, we have implemented a bacteria-based, chemical-free water treatment system. The resulting sludge from this system is distributed to local farmers as fertilizer.

LI-5. Does the entity have a business continuity and disaster management plan? If yes, please give details in 100 words or input web link.

Yes, the Company's operations are spread across 23 States and 5 Union Territories. There is no single area or office with significant business concentration. The Company's independence from any particular product category or geographical region is an inherent strength of its business model, enabling it to recover swiftly from adverse economic scenarios. The Company has remained resilient throughout the current geopolitical tensions and their direct impact on crude oil prices. It is well aware that the effects of such global events may be felt in the immediate to near future and has already begun assessing various internal and external factors to manage the situation and achieve a significant recovery once the crisis subsides. In the past, the Company demonstrated significant recovery after the pandemic. Although it reported substantial losses during the lockdowns, it was resilient enough to recoup those operating losses and bounce back with strong profits after the lockdowns ended. The economy has historically seen several highs and lows, with periods of economic slowdown as well as periods of revival. Having been in existence for over five decades, the Company has consistently demonstrated business growth regardless of economic conditions. This strength again stems from its lack of dependence on any single customer, product, or geography. Regarding business continuity, the entire operations run on the backbone of in house developed technology, and the entire IT framework is developed and maintained internally. This ensures that business operations function online, on a real time basis, in an unhampered manner, and that the organization has the flexibility to implement operational changes with minimal turnaround time.
